

TOOLS FOR EDGE BAND PROCESSING

Cutter

The edgeband has been glued and trimmed around the joint. Using the cutter, mill the protruding edgeband above and below on straight and chamfered board contours flush to the board.

Trimming should be carried out in one even stroke.

Benefits

- Removes adhesive residues (similar to the flat scraper)
- Easy to handle
- Less dirt than with a router
- Low noise

Technical data

- Can be used for all conventional types of edgeband material
- Also suitable for edgeband materials with metal coatings or inserts for a maximum protruding edge of 1.5 mm

Edgeband width: from 19 mm to 45 mm

Edgeband thickness: maximum 2 mm
