

# TOOLS FOR EDGE BAND PROCESSING

## Polishing tool with flap wheel

The polishing tool is used everywhere there are sharp edges, such as after processing with the cutter set or for special parts that have to be smoothed or rounded.

*Air pressure-operated polishing of the radius and removal of material residues.*

### Benefits

- Rounding and polishing gives the edgeband a fine and attractive appearance
- Excessive adhesive residues are removed in the same operation, without damaging the edgeband decor or the surface of the board
- Effective, precise and high quality
- Sanding accessories can be replaced quickly and easily
- Protective cover and automatic start protection for work safety

### Technical data

Drive unit:	Type GX31/30	Noise level:	78 DB (A)
Output:	300 Watt	Sisal flap wheel:	80x80 design
Air consumption:	9.0 l/sec	Speed:	3,000 Min-1.
Operating pressure:	6 bar	Air connection:	G1/4"

- Can be used for all conventional types of edgeband material
- Operated with compressed air
